

2023 California Almond Forecast

Pacific Region · 650 Capitol Mall, Suite 6-100 · Sacramento, CA 95814 · (916) 738-6600 · (855) 270-2722 Fax · www.nass.usda.gov/ca

Released: May 12, 2023

RESULTS

The USDA NASS Pacific Regional Office released an initial subjective forecast for 2023 California almond production. NASS forecasts:

- production at 2.50 billion pounds, 3% below last year's final production of 2.57 billion pounds.
- almond bearing acres at 1,380,000, 2% above the 2021 bearing acreage of 1,350,000.
- yield at 1,810 pounds per acre, down 90 pounds from last year, and the lowest since 2005.

The subjective production forecast is based on a survey conducted from April 19 to May 6 from a sample of 500 almond growers. Respondents had the option of reporting their data by mail, online, or phone.

The almond bloom began in the middle of February and peaked at the end of the month. Record level rainfall and unprecedented stormy conditions impacted pollination. Limited bee flight hours were reported in all growing regions. There were reports of downed trees due to high winds and oversaturated soil. Yields are expected to be the lowest in years, with variation observed across varieties and orchard locations.

Colder than normal temperatures continued through March and April, resulting in a delayed crop. Farmers are still evaluating their orchards for signs of disease and applying fertilizer and pest treatments as needed. Water availability is not a major concern this year.

PROCEDURES

Results of the subjective survey are based on opinions obtained from growers. The sample of growers changes from year to year and is grouped by size of operation, so all growers will be represented. Growers are asked to indicate their almond yield per acre from last year and expected yield for the current year.

ACKNOWLEDGMENTS

The USDA, NASS, Pacific Regional Office sincerely appreciates the many farm operators, owners, and management firms that provided their information. Time spent completing the survey is appreciated, and necessary for estimating the current condition of the almond industry in California.

2023 ^{1 2}	1,380,000	(NA)	1,810	2,500	(NA)	(NA)

¹ Preliminary estimate of bearing acres is based off the Almond Acreage Report and the Almond Nursery Sales Survey.

² Yield is a rounded calculation based off production and the preliminary estimate of bearing acres.
